Lab Exercise 22- Docker Image Vulnerability Scanning Using Trivy (Windows)

Name: Zuhair Ahmad
Batch: Devops B1
SAP ID- 500119134

Objective

By the end of this lab, you will be able to:

- **Install and configure Trivy on Windows**
- **Scan Docker images for vulnerabilities**
- **Interpret scan reports and take remediation actions**

Prerequisites

- **Windows 10/11 (with Docker Desktop installed and running)**
- **Internet access (Trivy downloads vulnerability databases)**
- **Basic familiarity with Docker CLI commands**

Step 1: Verify Docker Setup

Before using Trivy, make sure Docker is working correctly.

```
docker --version

docker run hello-world
```

Expected Output:

Docker runs successfully and displays the “Hello from Docker!” message.

Step 2: Install Trivy on Windows

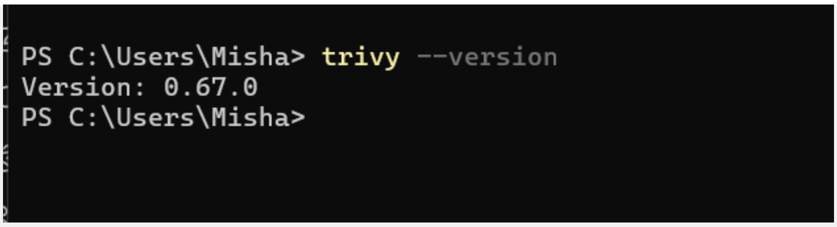
Manual Installation

1. **Go to the official GitHub releases page: https://github.com/aquasecurity/trivy/releases**
2. **Download the Windows ZIP file (trivy_x.x.x_windows_amd64.zip)**
3. **Extract it (e.g., to C:\trivy)**
4. **Add that folder to your System PATH environment variable**

Verify Installation

Open PowerShell and run:

```
trivy –version
```



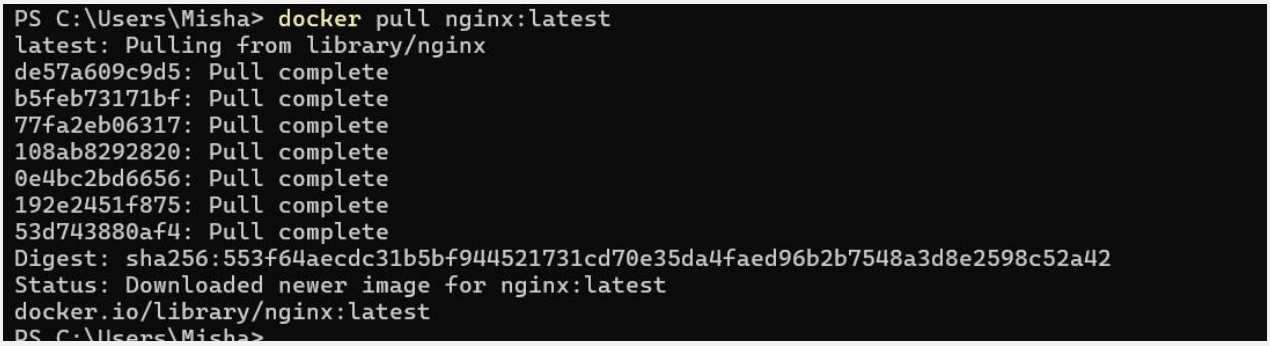
```
PS C:\Users\Misha> trivy --version
Version: 0.67.0
PS C:\Users\Misha>
```

Expected Output: **Trivy version and build information.**

Step 3: Pull a Docker Image

Let's pull an image that we'll scan:

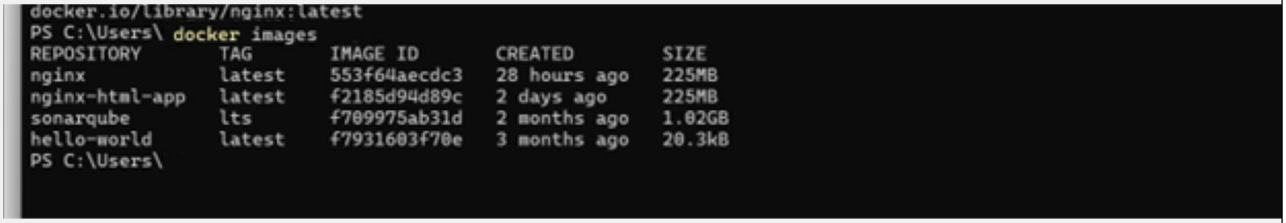
```
docker pull nginx:latest
```



```
PS C:\Users\Misha> docker pull nginx:latest
latest: Pulling from library/nginx
de57a609c9d5: Pull complete
b5feb73171bf: Pull complete
77fa2eb06317: Pull complete
108ab8292820: Pull complete
0e4bc2bd6656: Pull complete
192e2451f875: Pull complete
53d743880af4: Pull complete
Digest: sha256:553f64aecdc31b5bf944521731cd70e35da4faed96b2b7548a3d8e2598c52a42
Status: Downloaded newer image for nginx:latest
docker.io/library/nginx:latest
PS C:\Users\Misha>
```

Check it's downloaded:

```
docker images
```

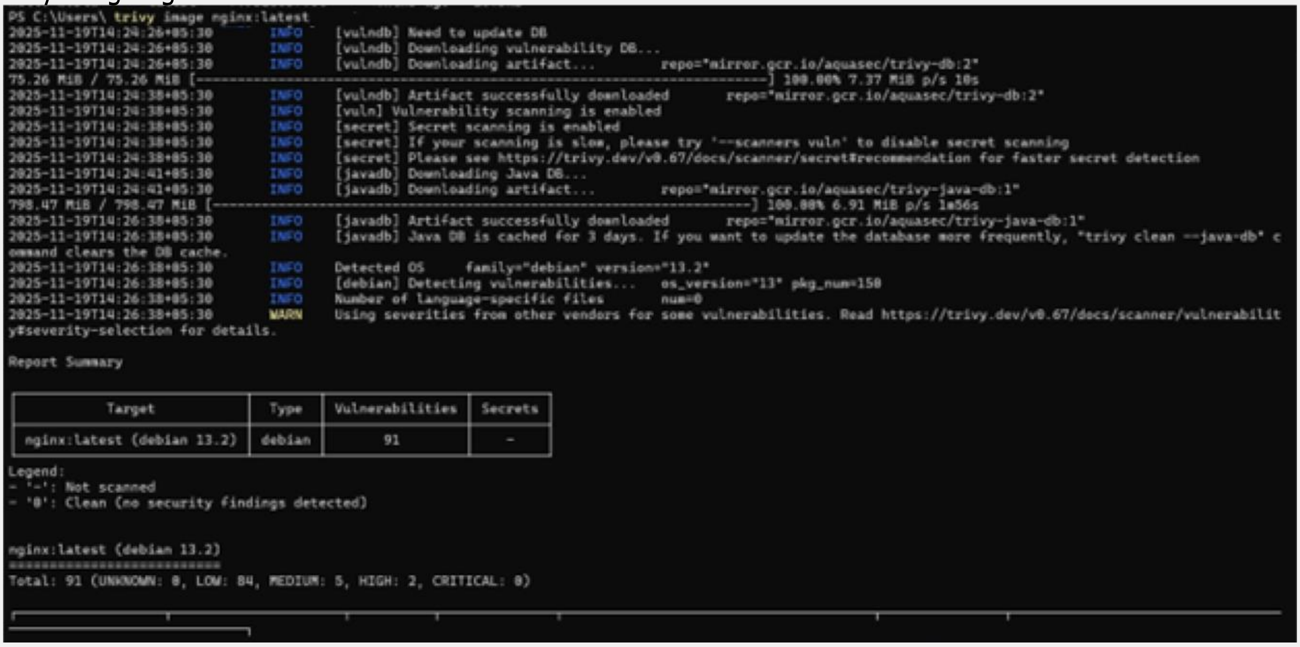


```
docker.io/library/nginx:latest
PS C:\Users\ docker images
REPOSITORY       TAG       IMAGE ID       CREATED         SIZE
nginx            latest    553f64aecdc3   28 hours ago    225MB
nginx-html-app   latest    f2185d94d89c   2 days ago      225MB
sonarqube        lts       f709975ab31d   2 months ago    1.02GB
hello-world      latest    f7931603f70e   3 months ago    20.3kB
PS C:\Users\
```

Step 4: Scan Docker Image with Trivy

Now, run a vulnerability scan on the image:

```
trivy image nginx:latest
```



```
PS C:\Users\ trivy image nginx:latest
2025-11-19T14:24:26+05:30       INFO    [vulndb] Need to update DB

2025-11-19T14:28:44+05:30       INFO    Number of language-specific files       num=0
2025-11-19T14:28:44+05:30       WARN    Using severities from other vendors for some vulnerabilities. Read https://trivy.dev/v0.67/docs/scanner/vulnerabilit
y#severity-selection for details.

🔔 Notices:
  - Version 0.67.2 of Trivy is now available, current version is 0.67.0

To suppress version checks, run Trivy scans with the --skip-version-check flag

PS C:\Users\Misha>
```

│                   │          │
│                   │          │     │          │        │               │                    │ https://avd.aquasec.com/nvd/cve-
2022-0563                   │
└───────────────────┴──────────┴─────┴──────────┴────────┴───────────────┴────────────────────┴─────────────────────────────────
──────────────────────────────┘
```

Explanation:

Trivy will:

- **Fetch the latest vulnerability database**
- **Analyze all OS packages and libraries inside the image**
- **Display severity levels (LOW, MEDIUM, HIGH, CRITICAL)**

```
Sample Output

nginx:latest (debian 12.2)

==================================

Total: 12 (LOW: 2, MEDIUM: 4, HIGH: 5, CRITICAL: 1)

┌────────────────┬─────────────────────────────┬─────────┬───────────────────┬────────────────┐
```

```
│ PACKAGE   │ VULNERABILITY ID      │ SEVERITY │ INSTALLED VERSION │ FIXED VERSION │
├───────────┼───────────────────────┼──────────┼───────────────────┼───────────────┤
│ openssl   │ CVE-2023-0464         │ HIGH   │ 3.0.6-1        │ 3.0.6-2    │
│ zlib      │ CVE-2022-37434        │ MEDIUM │ 1.2.11-5       │ 1.2.12     │
└───────────┴───────────────────────┴──────────┴───────────────────┴───────────────┘
```

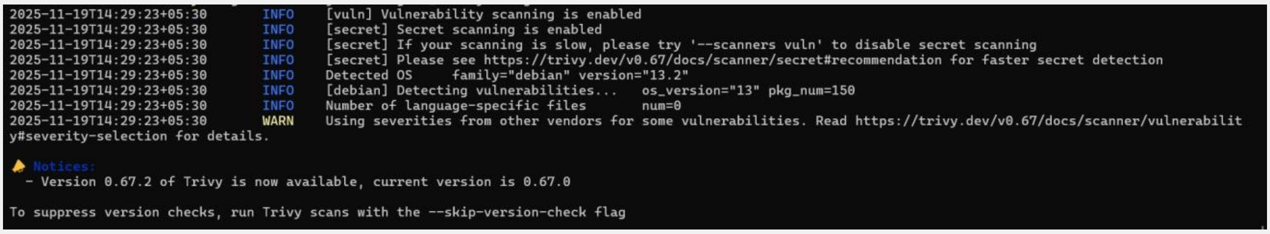
Step 5: Save Report to a File

You can export the results in different formats.

Save as a text file:

Save as a JSON report:

```
trivy image --format json -o nginx_scan.json nginx:latest
```



```
2025-11-19T14:29:23+05:30       INFO    [vuln] Vulnerability scanning is enabled
2025-11-19T14:29:23+05:30       INFO    [secret] Secret scanning is enabled
2025-11-19T14:29:23+05:30       INFO    [secret] If your scanning is slow, please try '--scanners vuln' to disable secret scanning
2025-11-19T14:29:23+05:30       INFO    [secret] Please see https://trivy.dev/v0.67/docs/scanner/secret#recommendation for faster secret detection
2025-11-19T14:29:23+05:30       INFO    Detected OS     family="debian" version="13.2"
2025-11-19T14:29:23+05:30       INFO    [debian] Detecting vulnerabilities...   os_version="13" pkg_num=150
2025-11-19T14:29:23+05:30       INFO    Number of language-specific files       num=0
2025-11-19T14:29:23+05:30       WARN    Using severities from other vendors for some vulnerabilities. Read https://trivy.dev/v0.67/docs/scanner/vulnerabilit
y#severity-selection for details.

🔔 Notices:
  - Version 0.67.2 of Trivy is now available, current version is 0.67.0

To suppress version checks, run Trivy scans with the --skip-version-check flag
```

Tip: **JSON format is useful for automation or CI/CD integration.**

Step 6: Scan a Local Image

If you’ve built your own Docker image:

```
docker build -t myapp:1.0 .

trivy image myapp:1.0
```

Step 7: Update Vulnerability Database

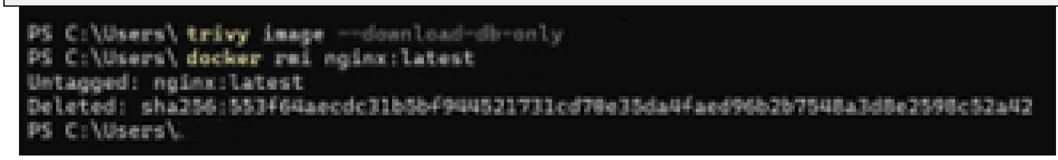
Keep Trivy’s database up-to-date:

```
trivy image --download-db-only
```

Step 8: Clean Up

Remove images (optional):

```
docker rmi nginx:latest
```



```
PS C:\Users\ trivy image --download-db-only
PS C:\Users\ docker rmi nginx:latest
Untagged: nginx:latest
Deleted: sha256:553f64aecdc31b5bf944521731cd70e35da4faed96b2b7548a3d8e2598c52a42
PS C:\Users\
